

Auto T-Die

Cloeren Dies come with various options such as; computer controller Auto Gauge™ automatic lip adjustment system, Internal Deckle Systems (IDS™) and Encapsulating Deckle Systems (EDS™).

Multi-Manifold Coextrusion Dies

EDI Dual manifold, single exit coating die incorporating sliding wedge clamp deckle and Autoflex® IV push/pull lock up system. The current trend in coextrusion is to demand improved layer-to-layer distribution and structures utilizing material with very different processing parameters. Multi-manifold dies spread the layers before combining them just prior to the lip exit. This allows the processing of resins with diverse viscosities and/or temperatures. EDI offers Auto Die with automatic die lip adjustment for maintaining minimal gauge variation.

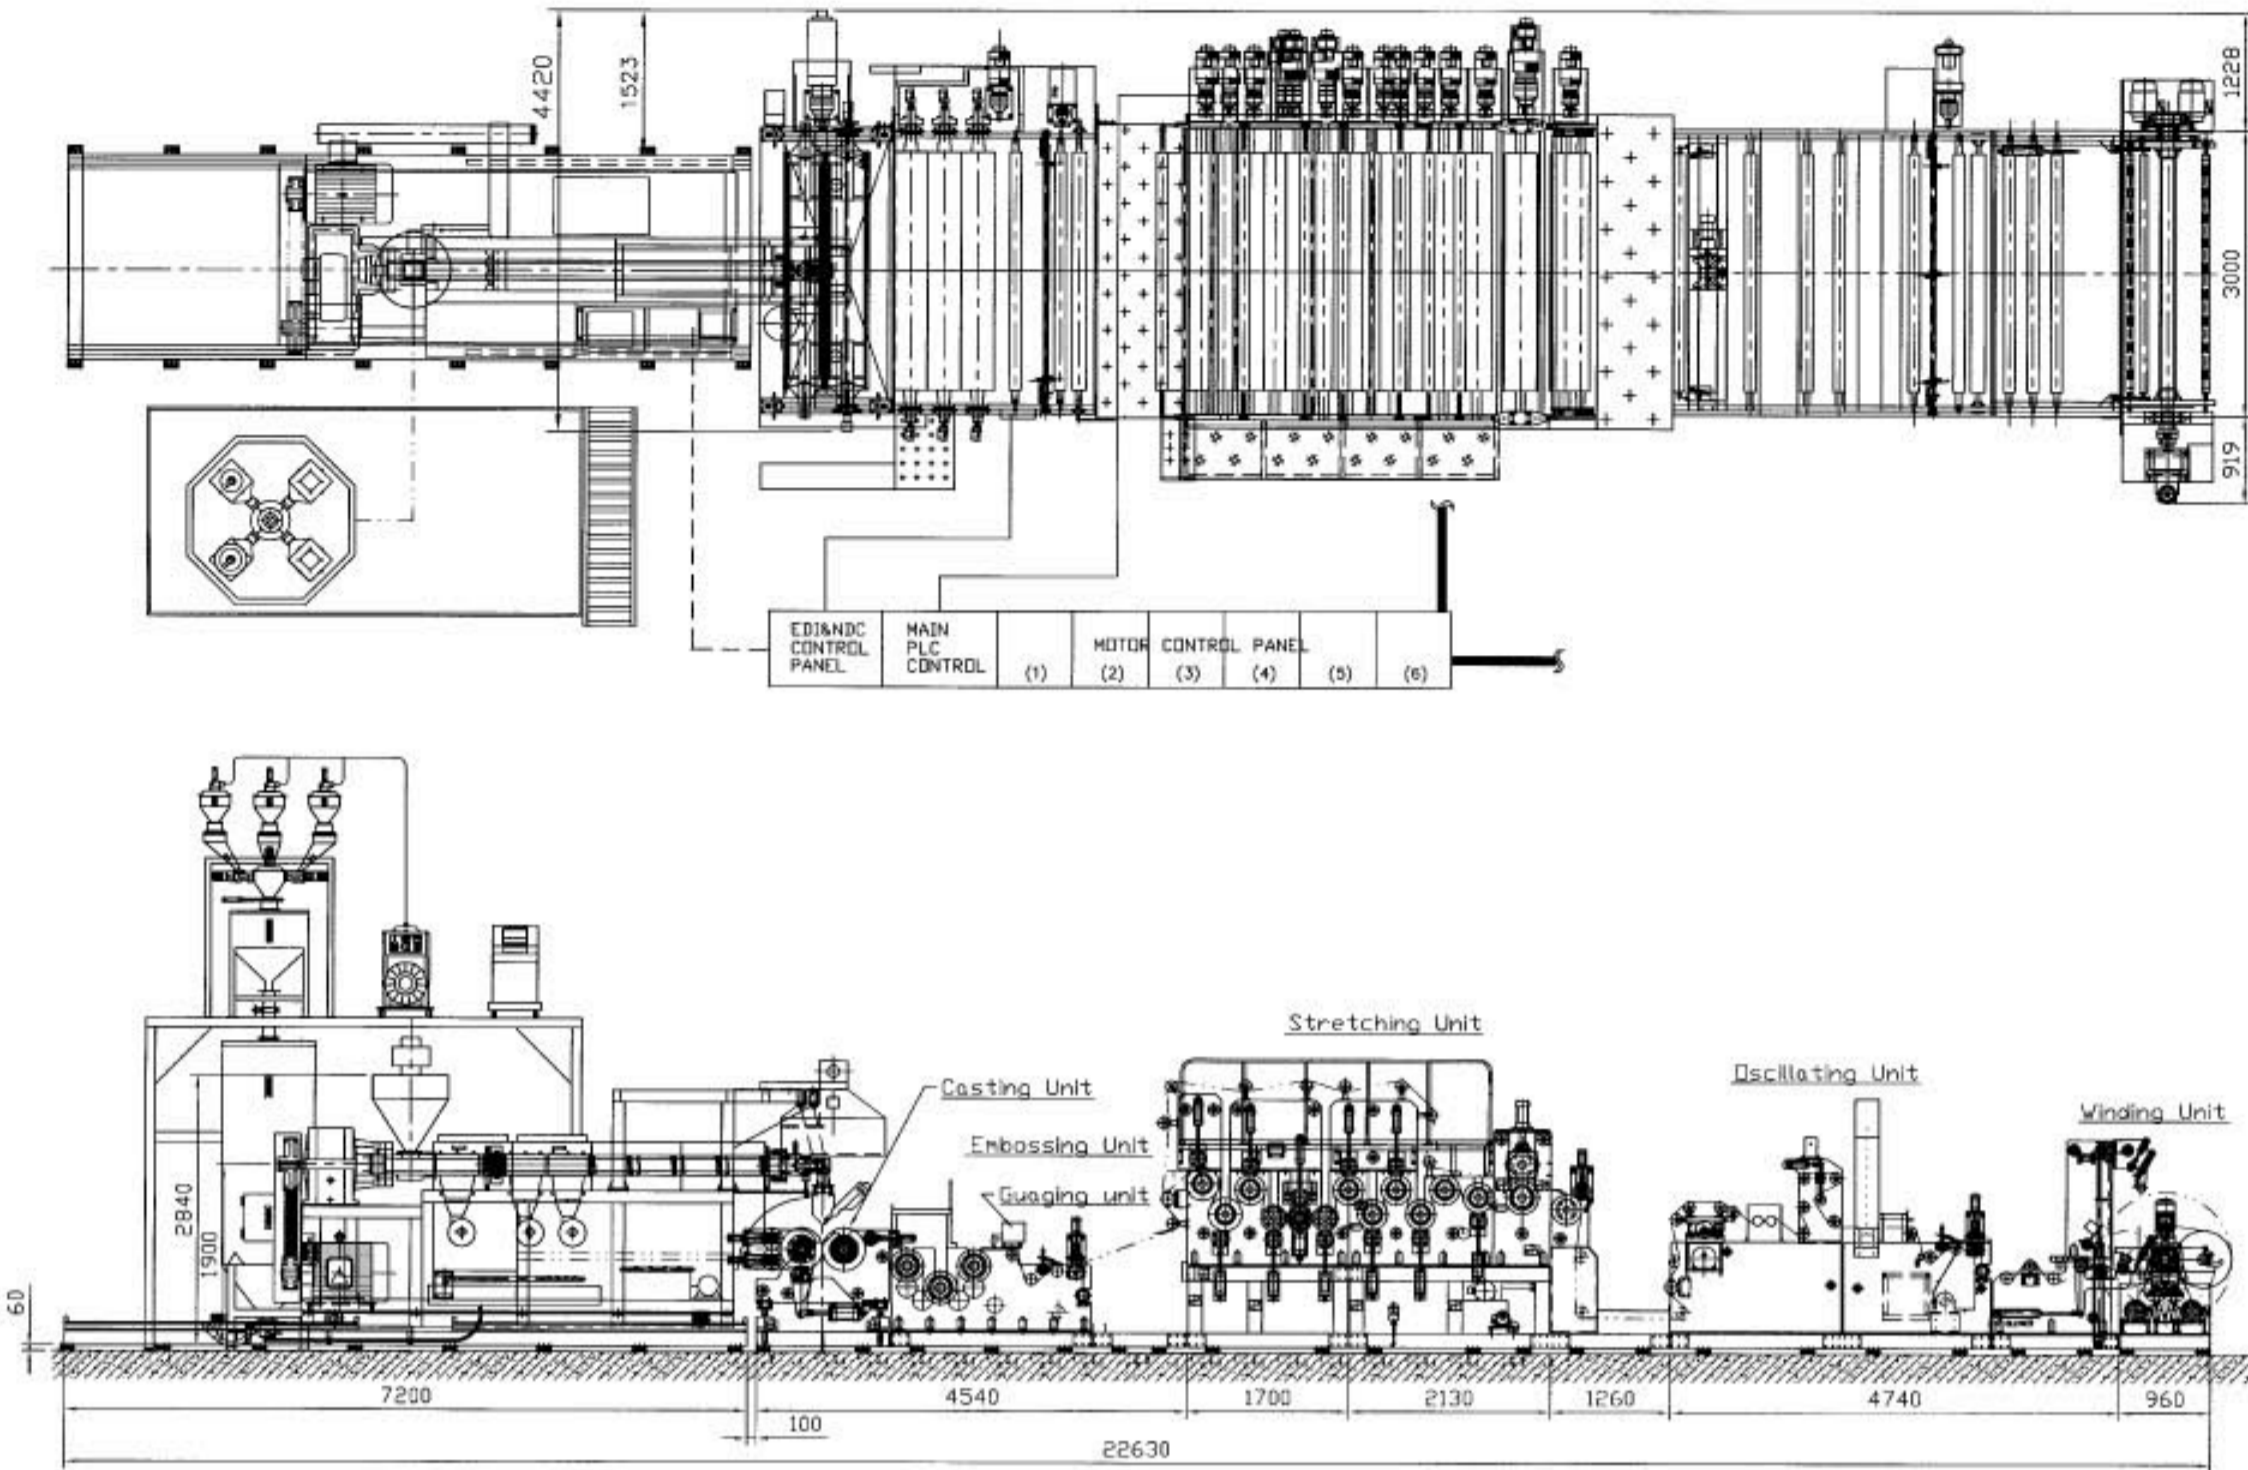

NDC Thickness Gauging System

- View Thickness Across the Web
- Manual Control or Automatic Control Incorporated to Auto Die

Other Options Available:

- Fully Automatic and Integrated Gravimetric System
- Edge Trim Recycling with Full Automation
- Multi-Component Blenders
- Lamination Systems
- Continuous Screen Changers
- Corona Surface Treaters
- Dehumidifiers
- Chillers

\* This Breathable Film is especially designed for baby diaper and mask. It has been used as an unique ventilating outer cover with micro pores. It helps to prevent stuffiness and rashes. Better air circulation, air goes out and liquid does not leak. Keep baby skin dry, comfortable and healthy.

\* This machine is using a 2.6M wide auto flat T-die from E.D.I. or Cloeren Co. with an auto thickness gauging system from NDC, USA This machine has been designed to be a complete automatic machine and easy operation
